CVA's PICK OF THE MONTH

Australia. The VET status imperative of meeting client 'needs' more so than 'wants'

In the expanded vocational education and training (VET) provider market arising out of the National Training Reform Agenda of the 1990s, competitive forces have not strengthened the delivery of VET in terms of innovation and quality. A situation has evolved where, in response to learner and employer clients seeking the easiest path to 'the ticket', there are instances of providers compromising their commitment to quality so as to compete with those who are opportunistically acting upon the client quest for satisfaction of 'want' rather than 'need'.

ARTICLES and PAPERS

Canada. Retirees set to outnumber Canada's youth for the first time

For as long as statistics have been kept in this country, the number of young people entering the work force has always exceeded the number nearing retirement.

Not any more. At some point this year, the number of 15- to 24-year-olds will slip below the number of 55- to 64-year-olds for the first time, according to Statscan's demography division. That represents a major symbolic threshold for a society just beginning the slide from a demographic golden age.

Canada. Continuing Professional Development and Continuing Competence for Professional Engineers / Guide sur le développement professionnel continu et sur le maintien de la compétence des ingénieurs

The purpose of this guideline is to articulate the mechanisms the constituent associations/ordre may use to encourage and monitor the competence of professional engineers within their jurisdiction.

En français. Ce guide a pour objet d'énoncer les mécanismes que peuvent utiliser les associations/ordre constituants pour stimuler et contrôler les compétences des ingénieurs dans leur secteur de compétence.

Luxembourg. Courage or audacity? - Modularisation and competence-orientation as key objectives of initial vocational education reform in Luxembourg

The law of 19 December 2008 implementing vocational education reform comprehensively modernises Luxembourg's system of initial and continuing vocational education and training. The main points of the reform consist of the reorientation of initial vocational education (IVET) towards a modular and competence-oriented structure. This article focuses on the two central concepts of this reform: modularisation and competence-orientation. Apart from clarifying how their meaning should be understood, the article explains how the concepts have been translated into the regulatory bases so far.

Malawi. Human resource development for poverty reduction: strategies for the informal sector

African countries are dependent on their informal sector and have much of their output and employment figures emanating from this sector. This paper adopted Malawi as a case study in human resource development for poverty reduction with an aim of getting a best plausible strategy in reducing poverty in Africa. Using the data set of informal sector programs in Malawi, the study recommended a family enrichment model as the best in getting these women out of poverty which will overall translate to getting Africa out of poverty.

Malaysian skills development and the middle-income trap

Can larger investments in education and human resource training carry a country that is caught in a 'middle-income trap' to a more knowledge-based economy, with globally 'adaptive competencies'?

A main problem regarding planning of labour skills is to avoid a mismatch between supply and demand for different categories of graduates.

Taxes and Investment in Skills

This paper considers the influence of taxes on the financial incentive to invest in human capital and explores the tax treatment of private investment by individuals and employers in post-compulsory education and lifelong learning in 31 OECD countries, India and South Africa. The desirability of different forms of tax relief for skills formation is examined from the point of view of efficiency, equity and administrative simplicity within the broader context of fiscal policy and the role of government in skills formation beyond compulsory education.

DOCUMENTS

Australia. Vocational Education and Training in Senior Secondary Education, Western Australia

It has been acknowledged that students may wish to include VET in their senior secondary program as a means of career exploration, a mechanism for achieving senior secondary graduation or to become more competitive in the workplace, further education, training or employment. Schools may view VET as a strategy for retaining and/or engaging students in senior secondary education or to 'value add' to a senior school program. Alternatively, industry may factor VET in schools as a part of an overall workforce development strategy providing students with basic skills for a future within the industry.

Canada/Newfoundland. Policy manual

The purpose of this policy is to ensure that those who have the desire and attributes to become qualified trades persons reach their goals by participating in quality training programs. The accreditation policy provides an auditing mechanism for provincial apprenticeship training programs independent of the education system. It also meets the challenges of technological changes by stimulating ongoing curriculum improvement through the process of continuous review.

Canada/PEI. Workplace Training program

Workplace Training is a program to provide financial support to employers in Prince Edward Island to assist in the development and provision of job-specific training. This program will support training initiatives by funding a portion of the salaries of employees while on training and other related training costs.

Canada/Québec. Exploration of Vocational Training

The Exploration of Vocational Training program offers young people the opportunity to become familiar with the vocational training sectors and the world of work. It enables them to discover a number of trades and occupations that might appeal to them, and to explore some of them more closely. Thus it encourages them to think about their future, identify their aptitudes, aspirations and keenest interests, and see themselves as future workers.

European Union. The Link between Job Creation, Innovation, Education and Training: An Assessment of Policies Pursued at EU Level

The study analyses how EU cooperation strategies in the realms of employment, innovation and education and training interact in shaping labour market dynamics and influence the quantity and quality of new jobs. It attempts to give an assessment of whether the current policies pursued at the EU level are appropriate to reach the objectives of generating higher growth and more and better jobs.

European Union. Attitudes towards vocational education and training

Vocational education and training, which nearly half of all Europeans choose to enrol in after their compulsory education, has a generally positive image among most age groups, linked to the high quality of training on offer and the strong job prospects that this brings. However, only 27% of young people aged 15-24 say they would recommend it to their peers, which shows that more needs to be done to improve the image and attractiveness of vocational educational and training within this crucial age group.

Bilan et développement de compétences

Le Bilan et développement de compétences met l'emphase à la fois sur l'identification et le développement de compétences : le bilan permet d'effectuer un retour sur l'apprentissage passé et présent de l'employé alors que le développement des compétences se concentre sur les projets d'avenir et les compétences à développer.

Canada/Québec. La formation continue se porte mal au Québec

Au Québec, chaque année, un travailleur sur trois suit une formation en rapport avec son emploi. C'est plus qu'il y a 20 ans, mais il reste du chemin à faire pour rattraper les États-Unis et l'Europe, où jusqu'à 50% des travailleurs se perfectionnent.

Mais encore faut-il enseigner les bonnes choses!

Un modèle empirique de l'évaluation régulatrice du développement des compétences

Cette communication rend compte de résultats portant sur l'articulation du développement de compétences avec la fonction de régulation des apprentissages inhérente à l'évaluation formative. Notre hypothèse est que l'évaluation des apprentissages peut fonctionner comme une boucle comparaison / régulation.

L'interprétation de données empiriques montrant que l'analyse de l'activité augmente le niveau d'auto-efficacité au travail a permis de formaliser la boucle comparaison / régulation qui est détaillée dans cette communication. Elle constitue un outil désormais accessible aux enseignants pour accompagner ces processus de développement et réguler, pour eux-mêmes cette fois, leurs modes d'intervention à des fins de personnalisation de la formation.
